I. Regulation Schemes	15
1. Fundamental concepts and definitions	15
2. Schemes for direct regulation	19
3. Indirect regulation scheme	20
4. Indirect regulation with rigid feedback	22
5. Isodromic regulation scheme	23
6. Block diagrams of regulation schemes	26
II. Statics of Regulators	36
7. Equilibrium conditions in the regulator mechanism	36
8. Curves describing the equilibrium conditions of velocities	38
9. Equilibrium equations of certain regulators	41
10. Degree of insensitivity of a regulator	48
11. Characteristics of regulators	50
12. Numerical example	52
III. Designing a Regulator With a Small Degree of Nonuniformity in Accord With Chebyshev's Method	59
13. Setting up the problem	59
14. Chebyshev's equation of regulator equilibrium	63
15. Computation of Chebyshev's regulator parameters	66
IV. Basic Equations Describing the Dynamics of Regulation	70
16. Equation of motion of a regulator coupling	70
17. Equation of motion of machines	77
18. Equation of servomotors	86
19. Equation of servomotors with isodrome	89
20. Typical equations describing regulation systems	92
V. Analyzing the Stability of Regulation Systems	97
21. First-order systems	97
22. Second-order systems	98
23. Third-order systems	101
24. Routh-Hurwitz' general criterion of stability	104
VI. Influence of the Parameters of a Regulated System on the Stability of the Regulation Process	111
25. Regulator parameters versus direct regulation	111
26. Vyshnegradskiy's diagram	114
27. Regulator parameters versus indirect regulation	116
VII. Mikhaylov's Stability Criterion	127
28. Principle of the argument	127
29. Mikhaylov's stability criterion	130
30. Construction of the characteristic curve	132
31. Characteristic curves of stable systems	137
32. Indicators of instability	150
33. Behavior of regulation systems toward the stable state	154

	<u>Page</u>
VIII. Analysis of Stability According to the Equation of an Open Regulation Circuit	159
34. Equation of an open circuit	159
35. Stability condition	167
36. Transformation of oscillations in an open circuit	175
37. Mikhaylov-Nyquist criterion of stability	178
38. Construction of amplitude-phase characteristics	184
39. Amplitude-phase characteristics of typical links	186
40. Amplitude-phase characteristics of one-loop circuits	196
41. Amplitude-phase characteristics of links acting on a derivative	198
42. Analysis of stability by amplitude-phase characteristics	200
IX. Criterion of Aperiodic Stability	210
43. Second-order systems	210
44. Vyshnegradskiy's condition	211
45. General criterion of aperiodic stability	213
46. Analysis with respect to the characteristics of links	219
47. Euler's criterion	221
X. Analyzing the Quality of the Regulation Process	222
48. Preliminary remarks	222
49. Equation of the transfer process	225
50. Analyzing the quality of regulation in very simple systems	229
51. Integral criteria of the quality of regulation	248
52. Degree of stability of automatic regulation systems	261
53. Determining the region of disposition of roots	271
XI. Criterion Governing the Monotonicity of Transfer Processes	278
54. Necessary indicators of monotonicity	278
55. Simplest systems with monotonic transfer processes	284
56. Fourth-order regulation systems	300
57. Existence theorems of monotonic transfer processes	305
58. Indicators of absence of overregulation	320
59. Indicators of the sign-constancy of transfer processes	321
60. Sufficient conditions for monotonicity	326
61. Evaluating the quality of regulation	331
62. Time of the transfer process	336
XII. Determining the Parameters of a Regulator for a Given Regulated Object	340
63. Setting up the problem	340
64. Systems with rigid feedback	341
65. Special conditions limiting the selection of parameters	346
66. Systems with flexible feedback	349
